

HEIRLOOM QUALITY PREMIUM BEECHWOOD FULLER BRUSH HAIRBRUSHES with NATURAL BOAR BRISTLES for Healthier Hair

A TRADITION OF QUALITY – FOR OVER 100 YEARS

HANDCRAFTED AT OUR KANSAS FACTORY BY PEOPLE WHO CARE. All the best materials and all the finest workmanship only mean something if the brush you select works. Hairbrush design requires technical knowledge, experience, and understanding of function. Fuller hairbrushes are designed to complement your type of hair with the brush design that will work best for you.

Seasoned Hardwoods. Fuller begins with the very best materials available. Brush handles are made from seasoned hardwoods selected for their durable qualities, currently Beechwood. Through the manufacturing process, each product is carefully inspected every step of the way. Like an extraordinary piece of hand-made furniture, our wood is carefully selected for its beautiful grain and individual strength. Each brush is hand-sanded and lacquered to create a smooth finish and rich luster. Bristles are stapled to stay. The Fuller brush you buy is a brush that will last a lifetime.

Natural Boar Bristles. Each brush is made with the finest natural boar bristles, which have tiny scales to actually clean your hair as you brush, removing dirt, excess oils, and scalp flakes. They distribute natural hair oils for an all over silky luster and help reduce split ends. Bristle ends lift hair to add body without pulling or stretching. They can last a lifetime with proper care. Since 1906, the Fuller brush has been made with only the very best boar bristles. Natural boar bristles are the best, and Fuller set the standard. Pure textured boar bristles naturally beautify by redistributing natural hair oils and proteins throughout your hair for a healthy shine, adding health and vitality to your hair every time you brush. White and black boar bristles are used separately or combined to create just the right softness or stiffness for your hair type. The number of bristle tufts, how closely tufts are placed together, the entire shape of the brush and handle all play an important role in making a hairbrush design that works for you.

Respect for the Earth's Creatures! No boars are harmed in the process. In fact we never touch them. Boars naturally shed their bristles and the mature bristles are then collected off the ground.

PROFESSIONAL STYLE. Get the straight and narrow! Widely spaced rows of natural boar bristles and a slightly longer handle quickly glide this brush through long strands of hair. Distributes natural oils to protect hair ends. These 5 Beechwood brushes are regularly \$35.99. We can tell you when they go on special.

HALF-ROUND STYLE. Twist-of-the-wrist styling for full bodied medium-length hair! Styling made easy by semicircular tufting. This classic boar bristle brush design lifts and curls for a fuller, bouncier look.

OVAL STYLE. Boar bristles in an attractive oval shape. Designed for nightly brushing ritual.

CLUB STYLE. Strong hair needs gentle brushing too! Perfect for short, thick, or curly hair. Ninety-two tufts of natural boar bristles spaced generously apart allow abundant hair to flow freely through the Club style brush. Now, thick hair can be brushed to a healthy shine. Sometimes called the Man's brush, good for anybody.

CLUB GENTLER STYLE. Same shape as the Club, but with natural soft boar bristles, ideal for fine or thinning hair.

ALSO AVAILABLE: Nylon bristle brushes, and BOAR BRISTLE BRUSHES with Plastic handles:

MILITARY STYLE. Shaped like the Club, but without the handle, to fit in the palm of your hand for close-up brushing. Plastic base. Natural Boar bristles.

LUSTREBRUSHES - plastic handles and boar bristles in Professional, Half-Round, and Pro-style Gentler.

PROPER CARE of PREMIUM BEECHWOOD HANDCRAFTED FULLER HAIRBRUSHES

CLEANING INSTRUCTIONS: Fuller brushes are handcrafted of durable seasoned hardwoods, lasting a lifetime with proper care. Maintain your brush's quality by removing hair from the brush with the #636 Brush Cleaner Tool (reg \$7.49; doubles as a great velcro cleaner to remove lint). When necessary, soak the bristles in a solution of warm water and shampoo. The shampoo will remove the hair oil trapped in the bristles. After washing, set with the bristles pointing down so water will drain away from the holes holding the bristles. Water will ruin the varnish finish over time. Do NOT soak in water!
